

240907 - MVC와 템플릿 엔진

HelloController

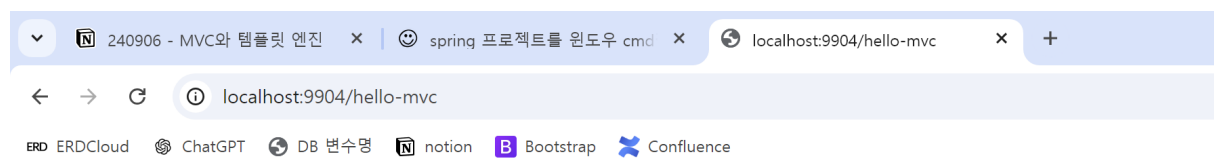

RequestParam = 파라미터값이 있어야 리턴된다.

```
@GetMapping("hello-mvc")
public String hellomvc(@RequestParam("name") String name,
    model.addAttribute("name", name);
    return "hello-template";
}
```

hello-template.html

```
<html xmlns:th="http://www.thymeleaf.org">
<body>
<p th:text="'hello ' + ${name}" >hello! empty</p>
</body>
</html>
```

파라미터 값을 넣어줘야 실행된다(Controller에 RequestParam이 있기 때문에)

Whitelabel Error Page

This application has no explicit mapping for /error, so you are seeing this as a fallback.

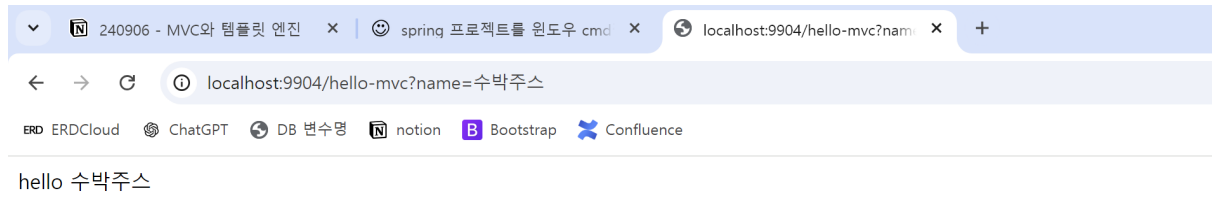

Fri Sep 06 17:22:03 KST 2024

There was an unexpected error (type=Bad Request, status=400).

Required parameter 'name' is not present.

org.springframework.web.bind.MissingServletRequestParameterException: Required request parameter 'name' for method

파라미터를 넣어준 사진. (<http://localhost:9904/hello-mvc?name=수박주스>)

★**ctrl + p** 함수 파라미터 정보를 보여준다.
